WARNING
TO TRUCK BUYERS!

A new era in truck power has dawned with the development of short-stroke engine design! Make sure you get a short-stroke engine in your new truck . . :

Check the specifications! If the stroke is as short as, or shorter than the bore—it's a short-stroke engine. Reduced piston speed cuts friction. Piston rings last up to 3 times longer. Gas savings up to 1 gallon in 5.

LOOK UNDER THE HOOD!

ONLY FORD gives you a Sho
Stroke engine in every truck

Whatever your truck requirement, remember there's only *ONE* manufacturer who gives you a Short Stroke engine in every truck from ½ up to tandem-axle giants. *FORD!*

Ford pioneered Short Stroke truck engines over three years ago. Today, Ford's get Short Stroke V-8's and a Short Stroke Six, with engineering refinements resulting in over five billion miles of on-the-job service.

So why settle for an old-type long-stroke engine? Think what can happen to your truck's ultimate trade-in value if it has an *outdated* engine! Go modern—go Short Stroke, go *FORD!*

New Ford Triple Economy Trucks save three ways:
1. Modern Short Stroke power in *every* model saves gas!
2. Modern *Driverized* Cab convenience saves work!
3. Modern high-payload construction saves trips!

RESEARCH IN NEW POULTRY BREEDS

Chickens fed entirely on synthetic diets (no grains or other commonly used feed) grow as rapidly and do as well as, if not better than, those fed on the best practical high-energy broiler feeds available today.

Jim Smith, County Agent, says tests in other states indicate, however, that the cost of producing one pound of chicken meat with such a diet is about $1.50 a pound. When this is compared with the present cost of from 18 to 25c a pound, no one needs to worry too much about the surplus grains that will accumulate from growing chicks on synthetic diets. The work is of interest, however, to show that the feed of the future will have energy from the cheapest source, whether from grains, corn cobs, wheat, or some other product.
